About me

I am a JavaScript Software engineer of the digital world. My expertise lies in software development, where I leverage my proficiency in TypeScript, Node.js, Next.js, and React.js to create seamless and responsive web applications.

Projects

X-Twitter Clone *- Social media web application*
Project link | **GitHub repository**
Software engineer | (Jan 1, 2024 – now)

- Attempts are being made to implement the main features of X in the clone version as well.
- In this application, users primarily engage in many functions such as posting, liking content and commenting on posts, searching for other users, subscribing to them or unsubscribing users.
- If there is any event for the user by another user, he will notify the user.
- In the program, the user can register through Google and GitHub providers or directly with some information.
- All data is securely and securely stored in the Mongo DB Atlas database.
- Created with TypeScript, Next.js & Next-Auth, Shadcn/UI, Tailwind CSS and Node.js.

Netflix Clone *- Movie trailer services*
Project link | **GitHub repository**
Web developer | (Jan 5, 2024 – Jan 23, 2024)

- The platform some of the project's best features such as user authentication, content management, search and filters, user interaction and social integration.
- Users can be authenticated by Google account and GitHub account.
- User data is stored securely within the Mongo DB Atlas database, employing Mongoose ODM for robust management.
- Information retrieved via the REST API from the TMDB database.
- Build with TypeScript, Next.js & Next-Auth, Tailwind CSS and Node.js.

Dicken-Town E-Store *- E-Commerce Store*
Project link | **GitHub repository**
Frontend developer | (Nov 24, 2023 – Nov 29, 2023))

- Mainly focused on optimized aspects of Next.js and some components, and similar Custom components were created for the convenience of site users.
- Data fetched via REST API.
- Developed using TypeScript, Next.js, Tailwind CSS, Headless UI and Tailblocks.

Edu-Platform *- Online learning platform*
Project link | **GitHub repository**
Frontend developer | (Nov 2, 2023 – Nov 18, 2023)

- APIs were created through Hygraph CMS and queried through GraphQL
- Developed using TypeScript, Next.js and MUI library.

Movie App *- A platform crafted to furnish intricate details about films*
Project link | **GitHub repository**
React-Native developer | (Dec 15, 2023 – Dec 24, 2023)

- Connected to data touchpoints via REST API with various types of requests.
- Data fetched from TMDB database.
- Developed using Expo ecosystem and Nativewind.

Boom Shop Market *- E-Store website*
GitHub repository
Backend developer | (Dec 3, 2023 – Dec 12, 2023)

- Mainly focus on Authorization via JWT and CRUD system.
- User data is fully secured and stored in Mongo DB Atlas database using Mongoose ODM.
- Developed REST API on Express server using Node.js.
- Developed using Node.js, Express.js, Mongoose ODM (Mongo DB), Handlebars engine.

Education

TypeScript, Next.js and **React-Native (Expo)** courses at "**Sammi.ac**"　　　　　(August, 2023 – January, 2024)

Full-stack web development course at "**Najot ta'lim**"　　　　　(May, 2021 – January, 2022)

Languages & Technologies

Frontend
JavaScript, TypeScript, React, Redux / Redux-toolkit, MUI, Tailwind, Headless UI, Shadcn/UI

Backend
Node.js, Express.js, Mongo DB, Mongoose ODM

Mobile
React-Native, Expo, Nativewind

Tools
Git, NPM, Yarn, Postman, Hygraph CMS

Language skills

- Uzbek: Native
- English: B1 (Intermediate)
